

Press Release 2012/04 #1

Castlegem opening a new point of presence: Prague

Castlegem is pleased to announce the opening of a new point of presence as of April 2012 in Prague, the capital of the Czech Republic.

Prague was chosen for two reasons: For one, Central and Eastern European locations are highly demanded, and they offer not only a presence in the CEE region, but are also able to serve several Northern European countries such as Denmark, Sweden, Norway, Finland, and others, thanks to their special connectivity. Secondly, Prague, together with Vienna, is one of the main capitals right in the heart of Central Europe. Castlegem is a proud advocate of multicultural ties, and aware of the immense cultural heritage and history this region has to offer (along with so many others, of course!) as well as the chance to emphasise that borders have no place when it comes to uniting people(s).

Our Prague data centre satisfies the highest standards with its state of the art facility, multiple redundant power feeds, A/C, and bandwidth feeds. Latencies, uptime, and throughput are outstanding, effectively ensuring a 100% uptime, and able to accommodate our clients' rising needs and wants in terms of connectivity, latency, and throughput.

At our point of presence in Prague we are offering our full range of services: Virtual Server Hosting, Dedicated Server Hosting, and Colocation.

All dedicated servers and Virtual Private Servers are branded hardware with full lifetime support, and offer a wide range of additional options such as managed system, 24/7 sysadmin availability, redundant servers, backup/recovery strategies, etc.
