

## **The Entry and Golden Mean Plan of a VPS Life Time**

Castlegem is a company committed to looking after its customer's needs, which means we strive to provide the best possible service available.

Drum roll..... Castlegem is therefore excited to announce its **entry** and **golden** mean plans for **virtual private server hosting**, which will be using solid state drives (SSD).

### **The Entry Plan**

- Offers over 30k read and over 20k write IOPS

### **The Golden Mean**

- Features a stunning 45-50k read and 45k write IOPS performance, with a sequential i/o speed of over 500MB/s.

Both plans are based on full virtualisation using KVM, and feature one virtual CPU (E3-1230v2 for the entry, E3-1270v2 for the golden mean) as well as 8GB SSD storage space, and 1 GB of memory.

The best part of this is, the plans start at only £ 10 excl. VAT per month, and Castlegem is only just getting started as it is setting and leading new standards for VPS hosting!

**Castlegem: *Enterprise performance for the community.***
