

Castlegem celebrating 5 years of community brand

Castlegem is proud to announce its 5th anniversary in 2013. Castlegem has been established in April 2008, with a focus on the community, and the commitment to provide enterprise performance and service to the community.

Originally established with points of presence in Vienna and the UK only (London and Manchester), Castlegem had to quickly adjust to client demand and expand its presence during the years: A second Manchester PoP was soon to follow, along with our West Coast, US, presence.

Later on, new locations were established on the US East Coast (Ashburn), and in Prague (CZ) and Hannover (DE) as far as Continental Europe was concerned.

Our latest additions were two more full PoPs, i.e. locations where we offer all services from Virtual Private Server (VPS), to dedicated server solutions, and colocation – LDEX in London, and our presence in Chicago, in particular tuned for our large trading community.

That said, we would also like to say thank you to all our loyal clients, and we look forward to our next 5 years with them!

Castlegem: *Enterprise performance for the community.*
