

Castlegem: Da Capo for the Minis!

Due to popular demand, Castlegem have decided to reintroduce their range of mini virtual private servers once more.

These VPS use the same enterprise grade hardware as all other VPS products and are backed by redundant components as well as RAID setup for all disks.

We have chosen London as the first PoP for the da capo of these plans, and currently these VMs are available at Telehouse and LDEX.

All plans feature 128MB memory to start with as well as 3GB SSD based storage space. All VPS can be upgraded with more memory and disk space to suit individual needs.

These virtual private servers are ideal for lightweight DNS servers, HA loadbalancers for starters, and similar purposes. All VMs are using KVM as virtualisation, exclusively.

The annual pricing for these services starts as low as £ 40.00 net – that is just £ 3.33 per month!

Join us and embark with us on this exciting journey – watch out for special offers and promotions, there will be many of them in 2014, so keep checking in to our facebook page at
