

Castlegem AS18845 adding Level3

Castlegem are pleased to announce that we are adding Level3 as another carrier and transit feed at our New York City point of presence.

The current mix includes AMC, Init7, and Cogent (with Staminus providing DDOS mitigation services) and already offers superb connectivity along with ultra low latencies across the globe: Our NYC and London PoPs are only 66ms apart. Central Europe, such as Vienna and Prague, can be reached in 88-91ms.

Adding Level3 to our mix – a mix that has always been going through permanent finetuning – will improve our network even further: additional redundant routes, fewer transit AS involves, and even better latencies to certain destinations.

Last but not lest, our NY traders will be happy to find another top notch carrier with a name in the finance industry for providing outstanding service in the list of carriers to use when they host with us.
